

Anaba Clinic — Patient Onboarding

Questionnaire Spec

Module: Post-Registration Clinical Intake

Sequence: Registration (AWS Cognito) → Password Setup → EQ-5D-5L Scale → **This Questionnaire**

Purpose: Capture symptom profile, treatment history, and severity with minimal patient friction.

UI Guidance: All fields are dropdown / single-select / multi-select. No free text unless explicitly marked optional.

Q1. Primary Symptom(s)

Field	Value
Field ID	symptom_primary
Input Type	Multi-select dropdown
Required	Yes

Options:

1. Anxiety
2. Depression / Low mood
3. Chronic pain
4. Sleep problems / Insomnia
5. Difficulty concentrating / Focus
6. Tremors or movement difficulty

- 7. Memory issues
 - 8. Fatigue
 - 9. Other
 - 10. Not sure
-

Q2. Prior Neuromodulation Treatment

Field	Value
Field ID	neuromod_prior
Input Type	Single-select dropdown
Required	Yes

Options:

- 1. Yes
- 2. No
- 3. Not sure

Conditional Logic:

IF neuromod_prior = "Yes" → show Q2a

Q2a. Type of Prior Neuromodulation Treatment (Conditional)

Field	Value
Field ID	neuromod_type
Input Type	Single-select dropdown
Required	Optional

Options:

1. TMS (Transcranial Magnetic Stimulation)
 2. tDCS (Transcranial Direct Current Stimulation)
 3. ECT (Electroconvulsive Therapy)
 4. DBS (Deep Brain Stimulation)
 5. Vagus Nerve Stimulation
 6. Other
 7. Not sure
-

Q3. Diagnosed Condition

Field	Value
Field ID	condition_diagnosed
Input Type	Single-select dropdown
Required	Yes

Options:

1. Depression
2. Anxiety disorder
3. ADHD
4. Parkinson's disease
5. OCD
6. PTSD
7. Bipolar disorder
8. Chronic pain
9. Other
10. Not sure / Not diagnosed

Q4. Current Symptom Severity

Field	Value
Field ID	symptom_severity
Input Type	Single-select dropdown
Required	Yes
Note	Uses same 5-point scale language as EQ-5D-5L for consistency

Options:

1. None
2. Slight
3. Moderate
4. Severe
5. Extreme

Q5. Current Medication / Treatment Status

Field	Value
Field ID	treatment_status
Input Type	Single-select dropdown
Required	Yes

Options:

- 1. Yes, currently
- 2. Yes, previously but not now
- 3. No
- 4. Not sure

Conditional Logic:
IF `treatment_status` = "Yes, currently" OR "Yes, previously but not now" → show **Q5a**

Q5a. Medication Name (Conditional, Optional)

Field	Value
Field ID	<code>medication_name</code>
Input Type	Free text
Required	Optional

Summary Table (Quick Reference for Dev)

#	Field ID	Type	Required	Conditional On
Q1	<code>symptom_primary</code>	Multi-select	Yes	—
Q2	<code>neuromod_prior</code>	Single-select	Yes	—
Q2a	<code>neuromod_type</code>	Single-select	Optional	Q2 = "Yes"

#	Field ID	Type	Required	Conditional On
Q3	condition_diagnosed	Single-select	Yes	—
Q4	symptom_severity	Single-select	Yes	—
Q5	treatment_status	Single-select	Yes	—
Q5a	medication_name	Free text	Optional	Q5 = "Yes, currently" / "Yes, previously but not now"

Total taps for minimum path: 5 (if no conditional branches triggered)

Total taps for full path: 7 (all conditionals triggered)

Notes for Implementation

- Every single-select/multi-select field must include **"Not sure"** and/or **"Other"** as a non-blocking option — do not force a hard answer where clinical uncertainty is expected.
- No field should allow submission without a selection (except explicitly marked "Optional" fields).
- Recommend progress indicator (e.g., "Step 2 of 3") since this follows EQ-5D-5L, to reduce perceived form fatigue.
